

optomap[®]

Retinal Exam

At Elk Grove Optometry, we pride ourselves in providing our patients the best eye care possible. Because of this, we now perform the **optomap[®] Retinal Exam** on all of our patients. This non-invasive procedure allows your doctor to see a much broader and more detailed view of the retina than with conventional methods. Upon review, the scan becomes a permanent part of your medical file, enabling your doctor to make important comparisons should potential vision threatening conditions arise in the future. ***Dr. Kageyama and Tamai*** will review the images and share the 3D view of the inside of your eye during your exam. ***Dr. Kageyama and Tamai*** strongly believe that the **optomap[®] Retinal Exam** is an essential part of your wellness eye exam. It is prescribed for all patients annually and will be part of your pretest workup.

****THIS TEST DOES NOT REQUIRE DILATION****

As part of your pretest work up, we will capture **optomap[®]** images for your Doctor to review with you. This advanced technology is convenient, informative, and important to your examination. Any questions you have about the **optomap[®] Retinal Exam** can be directed to the Doctors when the images are reviewed during your examination.

**Thank You,
Dr. Kageyama and Tamai**
